

Real Estate Insights

Tableau Storyboard — Key Findings & Recommendations

Purpose

The purpose of this storyboard is to present key findings from the analysis of regional real estate sales data, highlighting trends and variations across years, towns, sales ratios, and property types. These insights are intended to support the Municipal Planning and Zoning Board in making data-driven decisions related to taxation policy, zoning revisions, and housing development strategy.

Year-wise Sales Trends Visual: Sales Trend by Year Observation: Sales reached their highest annual level in 2021 and then declined in 2022. The trend highlights a major change in sales activity toward the end of the period.	Town-wise Total Sales Visual: Town Sales Amount by Town Observation: Hot Springs recorded the highest total sales amount among the towns shown, followed by Asheville and Lubbock.
Sales Ratio by Town Visual: Average Sales Ratio by Town Observation: Sales ratios differ substantially across towns. Bellingham has the highest average ratio at 25.82, followed by Keene at 14.94, while Bend is at the lower end with 1.42.	Property Type Composition Visual: Property Type Distribution Observation: Single Family properties represent the largest share of the property mix.

Key Findings and Recommendation

1. Overall Sales Trend

Sales peaked in 2021, reaching the highest annual sales level in the dataset, before declining in 2022.

2. Town-wise Sales Performance

Hot Springs recorded the highest total sales amount among the towns shown, followed by Asheville and Lubbock.

3. Sales Ratio Variation

Average sales ratios vary substantially across towns. Bellingham has the highest average sales ratio at 25.82, followed by Keene at 14.94, while Bend is at the lower end with 1.42.

4. Property Type Composition

Single Family properties represent the largest share of the property mix, indicating that sales activity is concentrated primarily in this property category.

Recommendations

Prioritize high-performing towns such as Hot Springs, Asheville and Lubbock for market analysis, while separately investigating towns with unusually high or low sales ratios such as Bellingham, Keene and Bend. Further analysis of assessed values, sale amounts and property characteristics can help explain these differences before making taxation, zoning or housing-development decisions.
